DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1, 3, 5-9, 11-12 and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Hasegawa et al., U.S. Patent No. 5,878,029 (hereinafter Hasegawa).
- 3. With respect to claims 1, 9, 11, and 15, Hasegawa teaches a communication system for implementing an overall communication policy [fig.9] comprising:
 - a first interface for accepting a first plurality of separate communication links forming a first trunked communication link [item 60 of fig.24 i.e. route a = 10M];
 - a second communication interface for accepting a second plurality of separate communication links forming a second trunked communication link
 [item 61 of fig:24 i.e. route b = 10M]; and
 - a plurality of processors [42-43 i.e. switches], each coupled to a
 corresponding different one of the first plurality of separate communication

links and coupled to a corresponding different one of the second plurality of communication links, and coupled to one another over a communication channel [figs.24-26];

- wherein each processor in plurality of processor is configured to implement a separate communication policy for data passing between the first trunked communication link and a corresponding one of the second plurality of communication links such that together the separate communication policies (i.e. each of requested bandwidth as route a or b) approximate the overall communication policy (i.e. usable bandwidth) [col.18, ln.13 col.19, ln.62], and wherein the plurality of processors are further configured to communicate among one another to adjust the separate communication policies to adapt to data flows passing through the processors [col.4, lns.27-46 and fig.25 i.e. allow bandwidth increase].
- 4. With respect to claims 3 and 12, Hasegawa further teaches each processor in the plurality of processors has a copy of each communication policy (101 i.e. residual bandwidth table) in the communication system and communicates with the other processors in the plurality of processors to keep state information current for each such copy [figs.19-20].
- 5. With respect to claim 5, Hasegawa further teaches each processor in the plurality of processors mirrors state information (i.e. route a = 15M and route b = 10M on both

Application/Control Number: 09/955,860 Page 4

Art Unit: 2151

route tables 62 and 63 indicating mirrors state) for reporting across the communication system [fig.19].

- 6. With respect to claim 6, Hasegawa further teaches each processor in the plurality of processors mirrors state information (i.e. route a = 15M and route b = 10M on both route tables 62 and 63 indicating mirrors state) for management across the communication system [fig.19].
- 7. With respect to claim 7, Hasegawa further teaches the overall communication policy is only implemented for traffic traveling from the first interface to the second communication interface [figs.19-21].
- 8. With respect to claim 8, Hasegawa further teaches the overall communication policy is implemented for traffic traveling between the first interface and the second communication interface in either direction [figs.19-21].

Claim Rejections - 35 USC § 103

- 9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 2151

- 10. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over

 Hasegawa et al., U.S. Patent No. 5,878,029 (hereinafter Hasegawa) as applied to claim

 1 above, and further in view of Howard, U.S. Patent No. 6,683,884 (hereinafter Howard).
- 11. With respect to claim 2, Hasegawa does not explicitly show adapting to data flows includes a first processor in the plurality of processors borrowing bandwidth from the second processor in the plurality of processors.

In a networking switching device, Howard discloses adapting to data flows includes a first processor in the plurality of processors borrowing bandwidth from the second processor in the plurality of processors [fig.2 and col.3, ln.8 - col.4, ln.24].

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Hasegawa in view of Howard by borrowing bandwidth from the second processor in the plurality of processor because this feature enables pre-selected classes to use more than their maximum bandwidth when there is bandwidth available [Howard, col.2, Ins.23-25]. It is for this reason that one of ordinary skill in the art at the time of the invention would have been motivated in order to limit the classes of traffic to a maximum bandwidth [Howard, col.2, Ins.21-23].

12. Claims 4, 10, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hasegawa et al., U.S. Patent No. 5,878,029 (hereinafter Hasegawa) as applied to

Application/Control Number: 09/955,860

Art Unit: 2151

claims 1, 9, and 11 above, and further in view of Raj et al., U.S. Patent No. 6,628,649 (hereinafter Raj).

13. With respect to claims 4, 10, and 13, Hasegawa does not explicitly show the plurality of processors is divided into a plurality of active processors and a plurality of standby processors, such that each processor in the plurality of active processors actively implements a communication policy on data, while a standby processor in the plurality of standby processors monitors the plurality of active processors for a failure of active processors, thus implementing the overall communication policy.

In a networking switching device, Raj discloses the plurality of processors is divided into a plurality of active processors (i.e. active switch components) and a plurality of standby processors (i.e. standby switch components) [col.4, lns.6-39], such that each processor in the plurality of active processors actively implements a communication policy on data, while a standby processor in the plurality of standby processors monitors the plurality of active processors for a failure of active processors, thus implementing the overall communication policy [col.3, ln.56 - col.4, ln.38].

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Hasegawa in view of Raj by implementing switch redundancy because this feature offers with high levels of redundancy to allow continued operation in the event of failure [Raj, col.3, Ins.60-62]. It is for this reason that one of ordinary skill in the art at the time of the invention would have been motivated in order to re-route data traffic in the event of network failures [Raj, col.3, In.59].

Response to Arguments

14. Applicant's arguments, filed August 10, 2005, with respect to claims 1-13 have been fully considered and are persuasive. The previous rejection of claims 1-13 has been withdrawn.

15. Applicant's arguments with respect to claims 1-13 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

16. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nghi V. Tran whose telephone number is (571) 272-4067. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Zarni Maung can be reached on (571) 272-3939. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
